19. Cuba	231.50	230.25	461.75
20. Turquie	171.35	202.80	374.15

1. The first step in the process of identifying a problem is to recognize that a problem exists. This is often done by comparing current performance to a desired state or goal.

2. Once a problem is identified, the next step is to define the problem more precisely. This involves determining the scope of the problem, the resources available, and the constraints that may be affecting the problem.

3. After defining the problem, the next step is to generate potential solutions. This is often done through brainstorming or other creative techniques.

4. The final step in the process is to evaluate the potential solutions and select the best one. This is often done by comparing the solutions against the criteria established in the previous steps.

105. Hill, Theodora	Nouvelle-Zélande	65.264
106. McDonald, Maureen	Canada	64.865

1. The first step in the process of identifying a problem is to define the problem clearly. This involves identifying the symptoms and the underlying causes of the problem.

2. The second step is to gather information about the problem. This involves collecting data and identifying the resources available to solve the problem.

3. The third step is to generate possible solutions. This involves brainstorming and identifying potential solutions to the problem.
